**Q-6 Case Study:-**

**(3 marks)**

India's industries form a vibrant engine that powers the nation's growth. From cotton mills humming in Maharashtra to IT companies glowing like digital constellations in Bengaluru, each sector adds its own sparkle. The country has three main types of industries—agro-based, mineral-based, and modern industries. Agro-based industries like textiles use farm products such as cotton and jute. Mineral-based industries like steel grow around rich mineral deposits.

Modern industries such as IT and automobiles rely on advanced technology and skilled workers. These industries provide jobs, improve trade, and help build roads, cities, and new opportunities.

1. Which are the three main types of industries in India?
2. Give one example of an agro-based industry.
3. Why are mineral-based industries important?
